

# **DIVIDE SERIES TENTS**

---

## **SETUP GUIDE**

## STEP 1

---

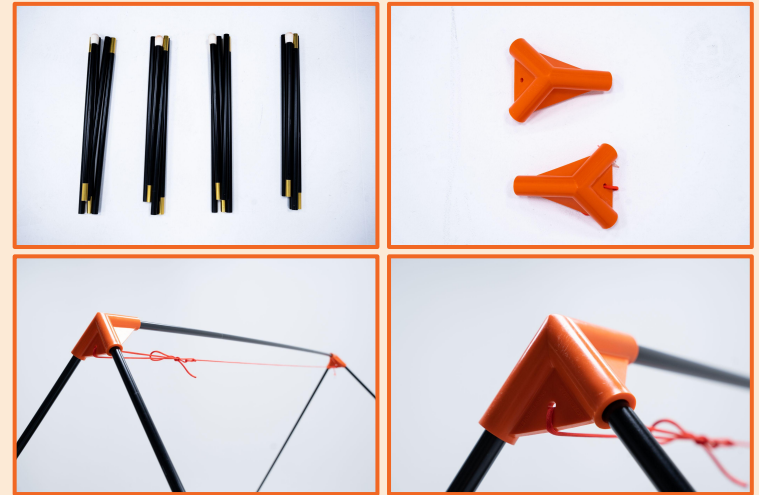

Neatly spread out the ground tarp/floor  
in a flat non sloping area

## STEP 2

Grab the set of 4 black poles with white rubber ends and the orange 3 way unions.

Unfold the black poles until straight and place each pole in an angled connection point on the orange 3 way unions.

## STEP 3

---

UNROLL THE CANVAS AND DRAPE THE  
CANVAS OVER THE POLES

## STEP 4

---

PLACE EACH END OF ANGLED POLES  
INTO POCKETS IN THE CANVAS TO  
SECURE THE CORNERS

## STEP 5

---

GRAB 4 STAKES AND STAKE DOWN THE  
CORNERS OF THE TENT

## STEP 6

---

TAKE THE 4 GOLD POLES AND EXPAND  
UNTIL STRAIGHT.

PLACE ONE GOLD POLE IN EACH OF THE  
HORIZONTAL SIDE POCKETS OF THE  
TENT

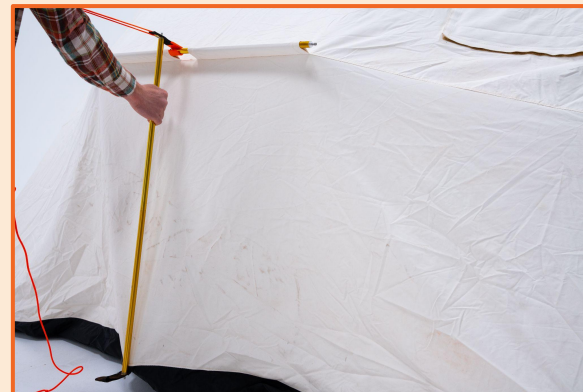

## STEP 7

---

ATTACH GUY CLIPS TO MIDDLE OF  
LATERAL POLES.

INSERT VERTICAL POLES IN GUY STRAP  
AND TENT BASE

## STEP 8

---

Pull the guy ropes outwardly until the sidewall of the tent is close to 90 degrees from the ground.

## STEP 9

---

There is one small black pole that does not break down. Take this and place it in the canvas loop in the back of the tent and then attach your guy out rope. (note: that there is no vertical upright stay pole for the back wall)

## STEP 10

---

At the front of the tent by the door you will install the thin black vertical stays and then guy out each one.

## STEP 12

---

This is what your tent will look like when all the guy out ropes have been properly tightened.

## STEP 13

---

Then tie in the tent floor. You can tie in the floor or use plastic toggle pieces that we sent you with the tent. Either way works great.

## STEP 14

---

If you are going to use a wood stove, make sure to unzip the floor to the tent and fold it underneath itself so that your floor does not get burned.

## STEP 15

---

When using the stove you will need to uncover the stove jack. The stove jack cover can be taken off and stored elsewhere or you can simply tuck it under the canvas flap as shown here.

## STEP 16

---

The stove jack is designed for the stove pipe to exit the tent vertically. Here is the floor, tent and stove.
